

## Handy Backup Network

**Handy Backup Network** is a data-keeping software solution for backing up and restore data via the network. It can serve well for a small office, a department or a couple of home machines. Handy Backup Network can support an unlimited quantity of client computers.

A user can control all network backup tasks through the centralized Management Panel, saving other users in the network from wasting their time for both backup operations and learning necessary procedures for these operations. The Network Agents installed to remote user machines make no distractions for users.

### Why Handy Backup?

#### Native backup formats

Browse your backups without an effort just by opening a backup folder with some file-managing tool (e.g. Windows Explorer). You can delete, move, restore, copy or even edit any content of your backup dataset as a simple file or a folder, due to preserving native data formats.

#### Unified backup interface

Automate any backup task, including backing up contacts, mails, files, folders, photos, videos, documents and any other data type, with the unified GUI (graphical user interface) common for all tasks and solutions provided by Handy Backup.

#### Convenient restoration

Handy Backup allows copying and restoring data in domain, non-domain and mixed network architectures, addressing remote machines by IP or by network names, as well as supporting some major Linux distros on remote workstations and servers.

**Backup types:** [full backup](#), incremental backup, differential backup, mixed (full and differential) backup, mirroring data.

# Handy Backup Network

## Simple backup for user data on remote machines

- [System recovery](#) and drive image backup in a “hot” mode for remote clients
- Simplified copying of files, folders, Windows libraries and registry, websites
- Auto searching different file types by masks of a name (e.g. Word, Excel or photos)
- Excluding temporary, system or archive files from backup datasets by file attributes

## A big choice of storages for your backups

- Any remote computer connected to the Management Panel machine via the Network Agent
- Remote FTP/SFTP/FTPS servers
- External drives such as mapped network disks and NAS units
- Cloud storages including Dropbox, Box, **HBDrive**, Amazon S3, Box, Google Drive and other
- USB flash drives, external drives and other USB-based storage devices

## Control and service functions

- Supporting an unlimited quantity of remote servers and workstations
- A flexible data transferring scheme supports a big backup traffic without overloading
- Optimizing data traffic and network usage for smooth and convenient workflow
- Running as Windows service, making no distraction for a user from a GUI
- Multi-threaded data transferring engine makes all operations fast and comfortable for users
- Email notifications, [report windows](#) and extended task log
- ZIP compression and 128-bit encryption, protecting backups with a password
- Running other programs before and/or after executing a task
- Auto running missed tasks

Perform the centralized backup for your entire network as fast and simple as any local backup. Just select a remote machine, set up what, when and where to back up your data, and let Handy Backup will do all other operations for you!

**Handy Backup Network** is a perfect solution for MS **Windows® 10/8.1/8/7/Vista** and **Server 2008/2008R2/2012/2012R2**, as well as for RPM-based or DEB-based Linux distributives. It can protect, copy and clone any data types for both a local server data and any quantity of remote computers. No special training required for using this solution properly. Any user with common knowledge about PC can work effectively with Handy Backup.
